

14.0 CONCLUSIONS AND RECOMMENDATIONS

The SAN SWMP describes procedures and activities intended to manage and reduce urban runoff pollution to the storm drain system, and ultimately San Diego Bay, from the operations and activities at SAN. This document was prepared by the Authority to be consistent with the Municipal Permit and the Industrial Permit to provide a written account of the various programs and strategies developed to comply with the requirements of these two permits and ultimately to improve water quality of receiving waters in San Diego Bay. The SWMP is a combination of the Authority's JRMP document required by the Municipal Permit and the industrial SWPPP required by the Industrial Permit. This SWMP contains information required by the Municipal Permit for each component of the Authority's storm water management program, including land use planning for new development and redevelopment, construction activities, existing development, IDDE activities, and education and public participation activities. It also serves to document the Authority's plans to meet the goals and strategies developed for the San Diego Bay WQIP. The WQIP serves as the tool to assess the effectiveness of Copermittees' individual JRMPs and to track progress toward meeting water quality improvement goals. The iterative process of the WQIP allows jurisdictional programs and strategies to be adapted and modified as the understanding of their impacts on water quality improves.

The requirements of the Industrial Permit are included in this SWMP to provide one document to serve as a reference for all Authority staff and tenants. However, the Industrial section and corresponding appendices and attachments will be extracted and uploaded via SMARTS per Industrial Permit requirements.

Any recommendations for future actions and/or program additions or revisions will be presented in the Annual Reports required by both the Industrial Permit and the Municipal Permit.
