### ERODIBLE AREAS

**PURPOSE:**
Prevent or reduce the discharge of pollutants to storm water from erodible areas by implementation of erosion control BMPs to stabilize soils and reduce pollutant discharges. This does not apply to natural, undeveloped areas, except where erosion is occurring as a direct result of onsite human activity, such as paving, land disturbance, or vegetation removal.

**TARGETED ACTIVITIES:**
- Erodible Areas
- Grounds Maintenance
- Construction Activities

**POLLUTION PREVENTION:**
- Implement the following pollution prevention practices and BMPs to prevent discharges of pollutants from building and grounds maintenance to the storm water collection system:
  - Minimize site operations on erodible areas.

**POLLUTANTS of CONCERN:**
- Sediment

**OPERATIONS:**
**Sub-BMPs**
- 01 Implement erosion control BMPs to stabilize soils.
- 02 Implement wind erosion control BMPs to control dust.
- 03 Maintain effective perimeter controls.
- 04 Stabilize loose soils and slopes prior to a forecasted storm event.
- 05 Prevent material tracking offsite.
- 06 Divert all storm water away from erodible materials.

**APPLICABLE TENANTS/DEPARTMENTS:**
- SDCRAA

**STRUCTURAL TREATMENT BMPs:** Refer to BMP TC01 for information on structural treatment BMPs.

**BMP FREQUENCIES/EQUIPMENT/TOOLS:** Erosion and sediment controls, and diversionary measures are used as needed. Equipment/tools to implement BMPs include various erosion and sediment controls, as applicable for the area, such as fiber rolls.

**AUTHORIZED BUILDING AND GROUNDS MAINTENANCE LOCATIONS:**
- To implement BMPs for the prevention of discharges or pollutants from grounds maintenance, erodible areas and construction activities, perform maintenance activities within the designated areas as shown in the attached map.
